EMDR is an evidence-based intervention used to treat various types of trauma (including child and adult abuse, war, natural disasters, accidents, terrorism, and violence). Based on the principles of exposure therapy, it is a short-term, trauma-focused therapy that focuses on activating change by restoring memories and attachment (sometimes referred to as "working with the body"). Many of those who have experienced trauma may have flashbacks, nightmares, intrusive thoughts, and/or physical reactions related to the trauma. EMDR allows an individual to rest in a comfortable but safe environment, thereby reducing these reactions and distortions to the point that the mind will no longer resist trauma-related feelings and memories. It is often used for PTSD (post-traumatic stress disorder), and typically for acute trauma (like the aftermath of a car accident). How does it work? There are 8 phases that comprise the therapy: Pre-processing: Educating the client on how the therapy 1cb139a0ed
