Maybe I'm not doing my research correctly. Any suggestions? Q: Connect iFrame to Parent Window I'm working on a project where I have an iframe that needs to link to the parent page. Is there any way to do this? I thought something along the lines of `top.location.href='my_url'`; Would have worked, but the above just changes the current page that is open in the iframe. I need to link to the parent page, so it will be the same page as it is if someone would open the parent page directly. A: In general: `var i = document.createElement('iframe'); i.src = ""; i.onload = function() { window.opener.document.location.`

However, since Mork Audio Player is ad-supported, it offers to download and install extra components made by other developers, which it does not actually require to function normally. The offer can be declined, though. Plain interface with straightforward options As far as the GUI is concerned, Mork Audio Player opts for a classical look and does not put emphasis on visual appeal, letting users immediately dive into the audio player controls. Tracks can be added to the playlist with the help of the file browser or folder view; the app shows their name and format. Basic audio player controls So, it is possible to pause and stop the track, seek a particular position in the playback by moving a slider, adjust the volume level, mute it, as well as to play the previous or next track. Apart from the fact that selected files can be removed from the list, there are no other notable options provided by this software utility. Evaluation and conclusion If low resources consumption was the app's primary goal, then Mork Audio Player succeeded, as it runs on a light amount of CPU and RAM. We have not come across any issues throughout our tests, since it did not hang, crash or pop up error dialogs. Although rich features are not integrated here, Mork Audio Player offers a simple solution to playing audio files without configuring complex settings, and it should be appealing to all types of users.
